Profile

AI Developer with a data science background, building, testing, and deploying AI agents, automation workflows and API integrations for business operations. At Celtine Ltd, I work directly with operational teams and business owners to identify automation opportunities and deliver reliable solutions, combining business logic with AI and LLMs where they add value. Hands-on experience with JavaScript, SQL, Python and API integrations. I hold a Master of Analytics (Honours).

Key achievements

- **Agents in production:** Designed and deployed AI agents that classify enquiries, retrieve business data and generate contextual replies, with escalation to staff.
- **Reduced manual work:** Automated sales orders, supplier stock checks, out-of-stock handling and dropship tracking across multiple brands.
- **Concept to working system:** Built social-media automation connecting product data, AI content generation, media rendering, human review and scheduled publishing.
- **Evaluation and reliability:** Built output checks and evaluations to identify failures and compare retrieval accuracy, model performance and cost.

Technical skills

- **Development and data:** JavaScript, Python, SQL, PostgreSQL, Supabase, Git
- **AI engineering:** Claude and OpenAI APIs, prompt design, tool calling, structured outputs, context management, multi-agent orchestration, RAG, LangChain, Ollama, ChromaDB
- **Evaluation and observability:** Deterministic checks, LLM-as-judge, DeepEval, reference datasets, retrieval testing, human review, execution logging, failure detection, cost and latency monitoring
- **Integration and infrastructure:** n8n, REST/GraphQL APIs, webhooks, authentication, Docker, Linux, Cloudflare Tunnel, credential and environment management, Claude Code, Claude Cowork
- **Analytics:** Power BI, Tableau, Alteryx, Snowflake, MATLAB, SAS, R, statistics

Work experience

AI Developer | Celtine Ltd *May 2025 – Present | Contract*

- Collaborate with operational staff and business owners to map manual processes, identify the automatable core, and decompose work into steps an agent can own.
- Build AI agents and automation with n8n, Javascript, APIs and webhooks, applying business rules for predictable processing and Claude/OpenAI models where language understanding and generation add value.
- Automate sales-order processing, supplier stock checks, out-of-stock notifications, dropship tracking and fraud screening by integrating e-commerce, ERP, helpdesk and shipping systems.
- Write evaluations and validate output; investigate production failures and eliminate silent failures; improve prompts, routing and error handling to strengthen reliability.
- Design for failure with graceful degradation and escalation to staff; keep prompts and instructions model-agnostic so providers can be swapped without a rewrite.
- Maintain the self-hosted Linux infrastructure supporting production automation (Docker, Cloudflare Tunnel, backups, credential management).

Projects

AI social media automation platform | Celtine Ltd *2026 – Present | ready to go live*

- Built a multi-workflow agent system for content generation, media rendering and publishing across Instagram, Facebook, Threads and TikTok, using product and media data from Magento 2 and a Supabase/PostgreSQL layer.
- Integrate Claude, Creatomate and platform APIs with OAuth token handling, scheduled publishing, evaluation and human review; test media selection, rendering and publishing failures before production rollout.

RAG knowledge assistant | Personal project for Hato Hone St John *2024*

- Built a local document question-answering assistant in Python using LangChain, Ollama and ChromaDB, combining BM25 keyword search with dense-vector retrieval.
- Compared chunking strategies and three language models on a synthetic question-and-answer dataset; fine-tuned an embedding model and evaluated retrieval relevance.

Additional work experience

Telecare Monitoring Representative | Hato Hone St John *October 2023 – Present | Part-time*

- Respond to emergency alarms and coordinate with customers, responders and support services; record incidents accurately and make timely escalation decisions under established protocols.

Campaign Developer | Digital Alchemy *October 2021 – February 2022*

- Built multi-channel marketing campaigns in Unica Campaign using customer segmentation; translated business briefs into campaign logic and completed pre- and post-campaign analysis with Oracle and SQL.

Analytics Specialist | Spark NZ (Skinny Mobile and Broadband) *January 2021 – June 2021*

- Built Power BI and Tableau dashboards and automated reporting with Alteryx, SQL and Snowflake; worked with product and marketing teams to turn analysis into practical recommendations.
- Awarded for best customer service
- Provided thorough analysis and post launch support for products and plans

Education and certification

Master of Analytics (Honours) | Auckland University of Technology *2023 – 2024*

- Studied statistics, machine learning and operations research. Thesis used support vector machines to classify stress from patients' brain EEG data, achieving 89% accuracy and 86.8% cross-validated accuracy, in collaboration with the New Zealand College of Chiropractic.

SAS Certified Specialist: Base Programming Using SAS 9.4

Bachelor of Technology in Computer Science Engineering | Jawaharlal Nehru Technological University, India *2007 – 2011*

- Advanced OOP concepts, Database Management, SQL, Mathematics, Statistics.
